

The APP Framework

AI productivity process

Table of Contents

- Phase 1: Identification Worksheet
- Phase 2: Architecture Worksheet
- Phase 3: Evaluation Worksheet
- Phase 4: Done in ChatGPT
- Phase 5: Implementation Worksheet

This worksheet helps you implement AI in your work so that you can be more productive

Phase 1: Identification 🔍

1) List all tasks you do repeatedly (daily, weekly, monthly)

Be specific about what the task involves

Task -

Task description -

Frequency -

Time per instance -

HEAD or HEART -

Notes -

2) Copy only your HEAD tasks below (automation candidates)

Calculate weekly time waste for each

Calculation formula:

Weekly Time Waste = (Time per instance) $\times$ (Frequency per week)

3) Pick ONE task to target first

Selection criteria:

- Highest weekly time waste
- Realistic to automate (clear input/output)
- Important enough to matter (happens frequently)

Phase 2: Architecture Worksheet

In this phase, you will design the AI solution, defining its inputs, outputs, quality standards, and boundaries

1) Define what you will input

2) Define the output and what makes a good output. Make a list of what would make a good output and what would make a bad output

Good output:

○

Bad output:

○

3) What knowledge does the AI need?

4) What boundaries will it have?

Define what AI will handle and YOU will handle

5) Define success

How will you know it's working?

How can i tell it will need improvement?

Phase 3: Evaluation

In this phase you will decide whether to build or buy

1) Search for existing tools that might solve your problem

Research at least 3 tools before deciding.

Where to search:

- Google: "[your problem] AI tool"*
- Tool directories: There's An AI For That, Futurepedia, Product Hunt*
- AI recommendations: Ask ChatGPT "What tools solve [problem]?"*
- Communities: Reddit, LinkedIn groups*

TOOL:

Tool name: _____

Website/URL: _____

Pricing: _____

What it does -

Pros:

-

-

Cons:

-

-

Does it solve my EXACT problem? YES / NO

Why or why not:

2) For your BEST tool option, score it against these 5 criteria.

CRITERION 1: Solves my EXACT problem

(Not just close - exact match to my needs)

Score (1-5):

CRITERION 2: Fits my workflow

(Easy to integrate into how I already work)

Score (1-5):

CRITERION 3: ROI positive

(Cost vs time saved makes sense)

Score (1-5):

Cost: _____

Time saved: _____

Worth it? YES / NO

CRITERION 4: Easy to set up and use

(Not overly complex or time-consuming)

Score (1-5):

CRITERION 5: *Reliable and maintained*

(Active development, good support, established)

Score (1-5):

TOTAL SCORE: _____ / 25

SCORING GUIDE:

- 20-25 points → *STRONG BUY* (use the tool)
- 15-19 points → *MAYBE* (test free trial first)
- 10-14 points → *WEAK* (probably better to build)
- 0-9 points → *BUILD* (no good tool exists)

3) *Decide - Build or Buy*

If buying:

Tool selected: _____

Pricing: _____

Setup time needed: _____

Expected time savings: _____

Next steps:

1. Sign up for the tool

2. Set up account

3. Integrate into workflow

4. Test for 2 weeks

5. Measure results

→ Skip to Phase 5: Implementation

If building custom solution:

Why existing tools don't fit:

-

-

Time to build (estimated): _____ minutes

Expected time savings: _____ hours/week

Next steps:

1. Proceed to Phase 4: Build (in ChatGPT)

2. Create Custom GPT

3. Test and refine

4. Implement in workflow

→ Continue to Phase 4 (Building)

Phase 5: Implementation Worksheet

This phase helps you implement your solution and measure results

1) AI solution summary.

What did you build?

What is its function?

How much time does it save?

2) Usage log

Use:

Date:

Update type:

Time spent:

Edits needed:

Quality rating (1-5):

Notes:

3) Quality checks

Does anything need refining?

If so, what are you going to change and how?

4) What benefits have you seen?

Conclusion

This workbook has guided you through the APP Framework, empowering you to identify, architect, evaluate, and implement AI solutions to improve productivity. By consistently applying these principles, you can effectively leverage AI to optimize your work processes and achieve significant ROI.

You now have:

- *One working AI solution*
- *Proven time savings*
- *Portfolio evidence (Asset 3)*
- *Repeatable process for next problems*

Congratulations! 🎉
